with Microsoft Office 365 from O₂

See how we can help larger businesses (200+ employees)

Here's an example

Daniel is the HR Director for a large insurance company with close to 500 employees. His staff work in a variety of departments and roles. They are based both in the office and out in the field. On occasion their work involves dealing with people overseas and in different time zones.

As a larger company with lots of staff, Daniel needs to ensure everyone is connected to the office. He wants to hold internal training sessions, without making everyone travel to the office. And he needs to stay in touch with overseas clients, but keep his bills down.

Not all his staff need the same level of access to the office. Daniel doesn't want to pay for services he doesn't need. With so many staff, security and business continuity is also important. And he wants to know he has professional support to help with any problems.

How can we help?

Microsoft Office 365 from O₂ gives Daniel the tools he needs to help his customers and staff connect with each other. No matter where they are in the world. There is no upfront investment in hardware. If he needs help with set up and moving over data? No worries. We also have the tools and know how to manage this whilst Daniel focuses on the day to day running of his business. And he can get all of this with one manageable subscription-based monthly cost**. It's as easy as that.

How can he benefit?

Microsoft Office 365 allows him to:

Work anywhere, on any device and online with award winning* O₂ connectivity

With access to our reliable internet connection, Daniel's team can login online and simply start work. They can work on more than one device and it will look the same on each every time they login. Some applications also work offline and backup automatically when online. Daniel can also choose from a wide range of devices to suit his team's individual needs.

No need for complex disaster recovery plans

Data is stored and backed-up securely and every cloud provider will take care of any issues quickly and efficiently.

Access large mailboxes, share calendars and contacts

Daniel will get 25GB storage per user and attachment limits of up to 25MB. His team won't need to use an external site for big files. They can see each other's calendars and availability to set-up meetings. This helps save time for everyone.

Hold face-to-face meetings wherever you are with Lync Online

He can make the most of HD video conferencing, online meetings and a virtual whiteboard. Daniel and his team can stay in touch with overseas clients in real time.

He can also hold internal training sessions for his field-based team. And instant message them to see if they're available. This saves time and money in travel, both in the UK and overseas.

Use subscription-based software

Daniel could use subscription-based software to keep costs down. There is no upfront investment. He can manage who uses the software and change it as he needs so it's scalable to his business.

Access, store and securely backup all documents and data through SharePoint

Daniel and his team can access central documents from almost anywhere. This encourages collaborative working on projects. It also helps to save time and means they can work at home or in the office. It's all backed-up to a secure remote server. It automatically updates with the latest software and anti-spam and anti-malware technology. So he doesn't have to worry about the security of his information.

Get support from Microsoft accredited experts

For any questions that Daniel and his team may have, we are here to help. Our experts can answer any question that is thrown at them. And we are there from set-up to on-going support.
