with Microsoft Office 365 from O₂

See how we can help
sole traders and small businesses
(1-9 employees)

Here's an example

Rob is an electrician. He works on his own and spends most of his time out and about visiting customers. He contacts them by phone and records appointments, quotes and orders in his diary, which can sometimes get messy. When he gets home he retypes this on his laptop and sends quotes out to customers by post or email, which adds extra hours to his day.

Although he's a small business he wants to look and feel professional. He wants an easier and slicker way to handle his paperwork and respond to customers by email. He needs to access all of this information whilst on the move.

So it's important that all of this information is saved securely and in one place. He'd also like a website to showcase his work and attract new business. But Rob isn't the most tech savvy so he'll need support and advice to get him started. And he needs all of this without a big price tag.

How can we help?

Microsoft Office 365 from O₂ gives Rob access to the latest software and business tools that means he can work more efficiently and looks more professional too. No big upfront investment. Instead a manageable monthly cost and IT support when he needs it.

How can he benefit?

Microsoft Office 365 allows him to:

Publish and manage his website and use a business grade email and email address

Rob could look much more professional with his own website and email. It can be fully managed in-house, with no additional hosting fees. Customers will instantly recognise emails that come through from him. Helping him to increase his brand and business profile.

Work anywhere, on any device and online with award winning* O₂ connectivity

With access to our reliable internet connection Rob can login online and simply start work. He can work on more than one device and it will look the same each time he logs in. Some Office applications also work offline and backup automatically when online. Rob can choose from a wide range of devices to find one that suits his needs. And, depending on the tariff chosen, he may even get it for free.

Access, store and securely backup all documents and data through SharePoint

Rob can access his documents from almost anywhere. This saves him time and means he can work on the move. It's all backed-up to a secure remote server. The software is subscription-based, so he has no long term contracts. It automatically updates with the latest software and anti-spam and anti-malware technology, so he doesn't have to worry about the security of his information.

Get support from Microsoft accredited experts and O₂ Gurus

For those moments when Rob needs a helping hand, we're there for him. Our tech savvy experts can answer any question that is thrown at them. And we are just a phone call away, so he doesn't have to wait long for help.
