

**Enable your people.
Increase efficiency.
Promote growth.**

We're helping organisations with next generation connectivity that makes their digital transformation plans much smoother, safer and productive.

O₂ Gateway brings together fixed, mobile and wifi networks into one platform to deliver greater reach, flexibility and cost efficiency. It's a future-proof platform that allows you to add new technologies and services as and when you need them, and scale up or down in line with business demand.

O₂ Gateway – your foundation for digital transformation. Discover what our innovative, converged network can do for you.

Time for a new way of working

Rising expectations and societal shifts towards flexible working, sustainability and convenience are forcing many organisations to rethink the way they operate.

Combined with constant calls for greater productivity, efficiency and profitability, satisfying all stakeholders is becoming harder and harder.

Digital transformation is changing everything. Whether it's what people want, how people communicate, or the speed with which your competitors launch new services. Digitisation is providing new opportunities to work smarter, enhance security and reduce the cost base for many businesses.

The end result: the ability to continually respond to new demands as the landscape continually shifts.

With O₂ Gateway you can underpin your digital transformation and stay one step ahead.

We're on a mission to be "the best provider of integrated digital services in the UK" based on three key pillars: creating a platform for a digital economy; providing service excellence, whilst being underpinned by brilliant digital experiences.

Introducing O₂ Gateway

As your technology partner, we can help transform how the right comms infrastructure empowers your business.

O₂ Gateway offers that single integrated connectivity platform, entirely owned and managed by us, giving you converged access to multiple services with one point of contact and one agreement.

What does this mean?

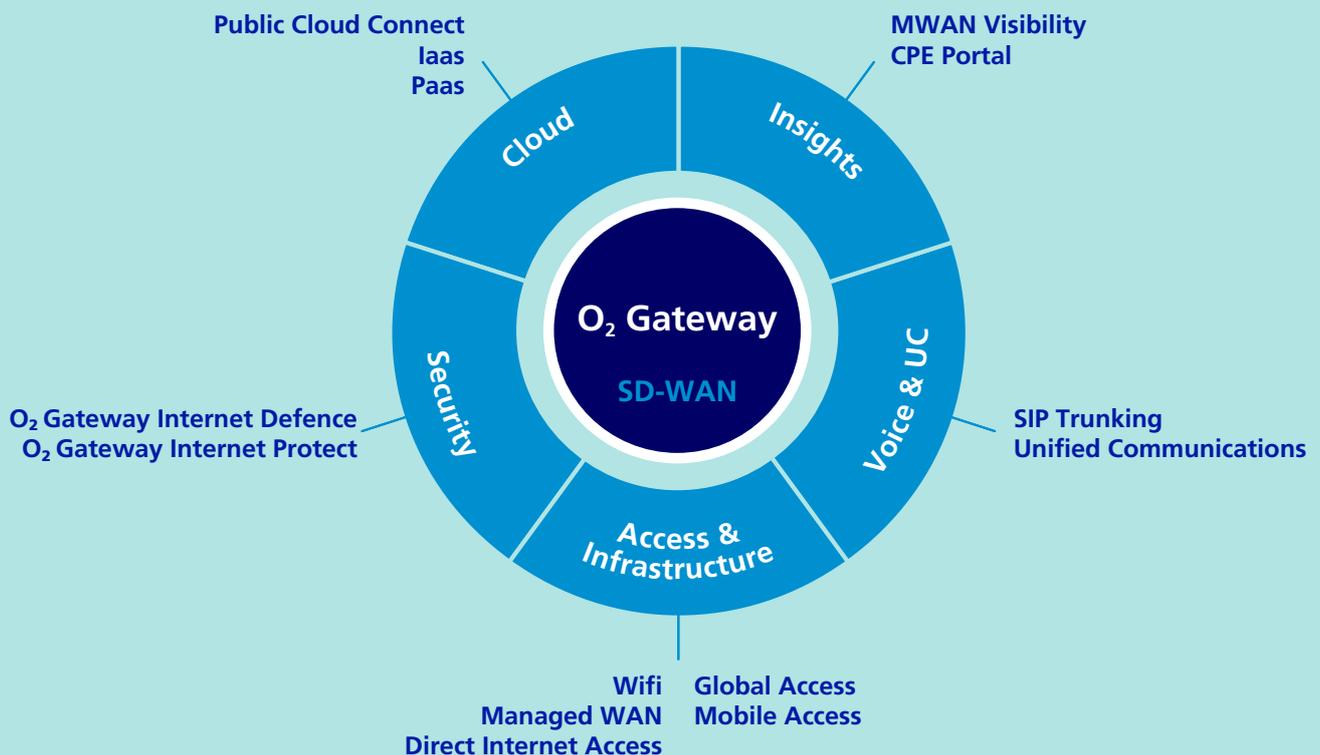

O₂ Gateway also makes access to the corporate network much smoother. You can add Private Mobile access, so remote workers can connect on any device with the same secure connection they'd have at HQ. This addition ensures mobile devices are given private access points, keeping data separate and secure from the internet

An optimistic outlook

Effective digital transformation addresses key challenges:

- Access to all applications and digital services from a single platform improves time to market for new services
- An integrated yet modular approach to digital technologies makes it easier to manage data security
- Consolidation of IT infrastructure lowers costs and improves agility
- Connected devices enable people across disparate locations to collaborate more effectively
- Data-driven insights meet growing demand for exceptional levels of service

Your one-stop-shop for connectivity

Whether it is internet access or as a site-to-site corporate WAN transit, O₂ Gateway provides the connectivity for all your digital needs. Because O₂ Gateway is wholly owned by us, adding new digital services is simple and quick without having to wait for a legacy WAN provider to catch up.

Improving everyday efficiency

When your people can communicate and collaborate without disruption, you can be more productive. O₂ Gateway optimises your infrastructure so they can interact with ease. It works seamlessly with mobile access.

Supporting the digital ecosystem in a global market

O₂ Gateway offers connectivity to the largest digital ecosystem in the market, allowing customers direct cloud connectivity to Amazon Web Servers, Microsoft Azure, O365, Google and Oracle cloud services. It seamlessly enables SIP, UC as a Service, private cloud and O₂ wifi access. And through Telefónica's global reach, O₂ Gateway WAN connectivity can be extended to over 125 countries around the world.

We are the first business to gain the government's National Cyber Security Centre security certification, CAS(T) for both WAN and mobile services. CAS(T) certifies an enhanced level of security over ISO27001 including additional controls where conformity to the controls is mandatory and independently audited annually to provide peace of mind.

Giving you greater agility

Once connected to O₂ Gateway, you'll be able to roll out new or additional services quickly and scale bandwidth up or down. Changes like these are unlikely to disrupt the physical infrastructure, which means rapid deployment and faster adoption.

With integrated mobile access, O₂ Gateway makes it easy to connect new sites to the corporate network faster than with traditional fixed infrastructure.

It also provides software-defined networking capabilities, so as new software-defined technologies emerge, your future-proof investment in O₂ Gateway means you can take advantage right away.

As well as a single, attractive commercial agreement, you can add services easily and reduce costs. We can simply add services to your existing Gateway WAN, for example, adding Public Cloud Connect when you're ready to move your compute to the Public Cloud.

Offering a simple and secure experience

O₂ Gateway is a converged platform, we have better control over services and user experience. If any problems arise, we'll sort them out rather than leave you to juggle multiple providers. One partner and one agreement helps you deal with issues before they impact your bottom line.

O₂ Gateway also makes access to the corporate network much smoother. You can add Private Mobile access, so remote workers can connect on any device with the same secure connection they'd have at HQ. This addition ensures mobile devices are given private access points, keeping data separate and secure from the internet.'

Impact of O₂ Gateway

In the boardroom

- Faster route to smarter working and digital transformation
- Better use of resources and more cost-effective projects
- Enhanced mobile access to corporate data for remote teams
- Proven savings
- Increased employee engagement, retention and make the business more attractive to new employees due to flexibility of working

For procurement

- Multiple services provided under a single agreement
- Easier way to allocate resources
- Simplified contract information for easier internal decision-making
- Reduced costs from flexible commercial options

On-site

- Easy access to full corporate network from any site
- Seamless collaboration for managing complex projects
- No hassle to add new sites onto the network
- Fewer errors and less time on the job

For IT

- Simpler network and user access management
- Faster provisioning of new services, including SD-WAN capabilities
- Consistent user experiences across the network
- Peace of mind at network, connection and endpoint level
- Dedicated access from your corporate network to public cloud providers where other services, databases or systems are hosted

Next steps

Let's meet to review your connectivity requirements and where you could see the biggest impact from O₂ Gateway. We can speak first to discuss the most appropriate attendees, agenda and timeline for a meeting.

And here's how you can benefit:

- It gives your business a proven blueprint for digital transformation, so you can:
 - work smarter and make better decisions faster,
 - deliver more cost-effective projects,
 - maintain service standards,
 - benefit from potential cost savings through simplification, and
 - all mobile devices are given private access points that keep data separate and secure from the internet.
- It unifies multiple communication and collaboration tools so your people can work securely and without interruption
- It offers all of this through one contract, one supplier and one network
- An award-winning network – and we want to keep it that way. That's why we continue to invest significantly in our network, as uSwitch recognised when we won Best Network Coverage in the uSwitch Mobile Awards 2019. We also won Best Network Performance at the Mobile News Awards 2019 and Best Business Network at the 2019 Mobile Industry Awards. Our ongoing commitment is to strengthen the experience for our customers through improved coverage, more reliability and increased capacity
