# As mobile use grows in your organisation, so does the risk of online attack and the complexity of staying compliant

---

It's why mobile security and data management are more important than ever. Data Governance from O<sub>2</sub> gives you peace of mind, making it simple to manage individual devices in real time, whilst keeping them protected from malware and phishing attacks. You'll also get the benefits of the fully connected workforce – without excessive roaming costs or bill shock – and you'll gain valuable insights into data usage patterns and trends.

## A focus on security

With mobile malware rising by more than 100% over the past two years, you need to increase your focus on device and network security. Make your data secure with Data Governance from O<sub>2</sub>, blocking access to dangerous sites and remotely managing your devices.

### With Data Governance you can:

- Optimise the way mobile data is used with real time granular reporting
- Drive productivity by giving access to business critical services at all times
- Tie each tamper-proof policy to the individual SIM, so if a user puts it into another device, your policy will still apply
- Benefit from a cloud-based solution for a rapid rollout and easy management, with no additional on-premise hardware costs
- Remotely locate, lock and wipe devices to keep your information secure
- Block malicious sites and prevent malware and phishing attacks
- Personalise policies for individuals or groups

Our cloud-based solution gives you the ability to apply tamper-proof policies to individual devices or whole groups, to control roaming. You'll also get insight into the patterns and trends of mobile data consumption. It can be managed anywhere, in real time. And it works with any SIM based device – regardless of manufacturer or operating system. You get the benefits of cost savings, improved visibility, security, simplicity and flexibility.

### Using a simple, web-based admin portal, Data Governance can limit data rates and block and impose data caps based on a combination of:

- The geographical zone or region the device is in, such as 'home', 'roaming', 'EMEA' or 'APAC' for instance
- The type of web content the device is trying to access, such as video, social, email and app updates
- The amount of data already consumed in the day week/month and if the user is approaching their monthly limit
- The group you've assigned the user to
- The time of day the device is accessing the internet

# What you get with Data Governance

- A fully managed and flexible cloud-based solution which reduces costs and manages mobile data usage
- Advice from a trusted comms integrator provider with a heritage in mobile
- A substantial portfolio of Digital Workplace solutions, encompassing platforms, devices, applications and cloud

## Why O<sub>2</sub>

We're trusted as the comms integrator for some of the UK's most respected organisations, with years of unrivalled business mobile experience. We have close relationships with all the leading suppliers, so our mobility experts can create the right solution for your organisation from our portfolio of Digital Workplace solutions, whether that's standalone products or a combination of platforms, devices and applications, and using a mix of on-premises, hybrid and cloud-based solutions.

You can rely on our network too. **uSwitch** named us the UK's best network for coverage in 2018 and 2019<sup>1</sup> and we were rated the UK's most reliable network in 2018 by **GWS**<sup>2</sup>. And as the UK's **best business network** we were the first telecoms operator to be CAS(T) Certified for both Mobile and Fixed communications<sup>3</sup>, which gives you greater peace of mind about the security of our network.

## We'll support you all the way

If you'd like to make it easier to manage your devices, keeping them up-to-date with security software and enabled with the latest tools, speak to your Client Manager, call us on **01235 433507** or visit **o2.co.uk/business**
